Note:Students have to write programs along with outputs every lab and get the observation signed by the faculty incharge. For every lab Observation carries Marks

Problem Statements

Q1. Prime Number Check

Write a program to check whether a given number is prime or not.

Q2. Factorial Using Loop

Write a program to find the factorial of a given number using a loop (not recursion).

Q3. Fibonacci Series

Write a program to print the first n terms of the Fibonacci series.

Q4. Sum of Digits

Write a program to find the sum of digits of a given number using a while loop.

Q5. Multiplication Table

Write a program to print the multiplication table of a given number up to 10 terms.

Q6. Palindrome String Check

Write a program to check whether a given string is a palindrome, without using string slicing ([::-1]).

Q7. Count Vowels and Consonants

Write a program to count the number of vowels and consonants in a given string.

Q8. Reverse a String

Write a program to reverse a string without using the built-in reversed() function or slicing.

Q9. Anagram Check

Write a program to check whether two given strings are anagrams of each other.

Q10. Count the Number of Digits

Write a program to count the number of digits in a given positive integer
